

Generative Design

Questions

- Q: Is generative design really AI? Evolutionary algorithms have been around for a while.
 - It uses a little bit of machine learning (when to stop generating, learning preferences) but **ML is mostly not central**
 - **AI is more than ML**, this probably qualifies as AI under most definitions
- Q: Is generative design having a big impact?
 - In some ways (Czinger for example), but by no means mainstream
 - Probably in the trough of the hype cycle right now

Arrival

Microfactories and Automated Production
