

Arrival

Microfactories and Automated Production

Microfactories

Production Moves Where You Need It

- Like Czinger, Oxfordshire-based Arrival built a vertically integrated production process
 1. Robotic production cells 20x20 feet in size
 2. Cells receive materials from autonomous mobile robots
 3. Custom designed materials and vehicles
 - Body panels are layered fabric + adhesive (reminiscent of carbon fiber)
 4. Can switch from making vans to busses relatively easily. (In theory!)
