The Style in StyleGan

- Can we get get it to stylize things the way we want?

  - Not perfectly, but we're getting there. Some examples below.

  - Notice how colors change with the shape and black is always one of them

Color blocking

Top shape

Vertical thickness

Top height

Novelty

- Does it just reproduce styles or does it come up with new ones?

  - It definitely produces new styles

  - You can control how adventurous it is at the cost of fidelity to original data

High fidelity to original data (lots of grey and black, similar shapes)

More adventurous (more colorful, more novel, but not as "Nike")
